While working at JPPI “Jūrmalas Kultūras centrs” and VSIA “Latvijas Nacionālais Simfoniskais orķestris” I’ve accumulated quite a bit of experience in both live and recorded sound mastering as well as working with lighting and video. An important part of my work was working with international clients ranging from musicians to ambassadors of various nations. Key part was understanding their needs and reaching achievable technical solutions. Most of my software skills are self-taught out of both interest and sheer need during various projects. Apart from that I’ve also dedicated my time in learning web development (HTML/CSS/JS). I’ve always thrived to be among the hardest working employees. Apart from my work experience I’ve graduated with a Bachelor’s degree in Multimedia Communication (BCoMS) as well as obtained a Professional certificate for road haulage within EU. I’m a native speaker in Latvian but I’d like to think I’m fairly proficient in English, Russian and a bit German as well.
